Information about Copyrighted Content

Some instruments administered for studies archived with ICPSR may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

NOTICE

WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

DOCUMENTATION
for
MIDJA 1
CLINIC VISIT
DATA COLLECTION
PROTOCOLS

University of Wisconsin ♦ Institute on Aging
July 2018

INTRODUCTION

This document provides an overview of the data collection protocols implemented at the Clinic Visit for the MIDJA 1 Biomarker Protocol. It describes the protocols for assessment of vital signs and morphometrics, collecting and processing tissue samples, and also provides information about the construction and usage of related administrative and constructed variables. In addition, it contains descriptions of the biomarker assay methods including details about assay ranges, reference ranges, and inter-, and intra- assay covariation.

Data users are also encouraged to review the MIDJA 1 Biomarker DataFile Notes.doc. This document provides information about naming conventions, administrative and filter variables, and the order in which variables appear in the data file. It also includes information about how we handled missing values and other issues that arose over the course of the study.

This document will be periodically revised and updated as more information is gathered, and researchers continue to work with the MIDJA 1 Biomarker data. If there are suggestions or comments, please contact Gayle Love (glove@wisc.edu) or Barry Radler (bradler@wisc.edu).

SECTION A

OVERVIEW OF DATA FILE AND COLLECTION PROTOCOLS

OVERVIEW OF DATA AND COLLECTION PROTOCOLS

The MIDJA Biomarker clinic visit includes collection of:

- Vital signs and morphometrics:
 - blood pressure
 - height, weight, waist and hip
- Blood samples for biomarker assay
- Medication data

As described in “MIDJA Biomarker Data File Notes”, the naming convention organizes variables according to the data type or method used for data collection. The variable names for the Clinic Visit data, unless otherwise noted below, begin with the unique 3 character set “J2C”.

The remainder of this section provides some administrative details as well as an overview of the following sections.

Vital Signs & Morphometrics

A copy of the form completed during the clinic visit appears in Section B. This section also includes detailed instructions for obtaining vital signs and morphometrics according to the same protocols for collecting the corresponding data in the MIDUS Biomarker study.

Blood Assays

The blood samples allow for assessment of multiple indicators within the following major systems as follows:

- *Cardiovascular*: Cholesterol Panel (Total, HDL), Glycosylated Hemoglobin (HA1c)
- *Neuroendocrine*: DHEA, DHEA-S, Creatinine
- *Inflammatory*: CRP(C-Reactive Protein), IL6 (InterLeukin 6), sIL6r (soluble IL-6 receptor), Fibrinogen

Blood samples were collected and processed into fresh and frozen aliquots using standardized protocols. Details about these protocols appear in Section C. The aliquots were then sent to Syowa Medical Service Co. LTD, in Tokyo, Japan (SMS) for further processing and some assays as follows:

- Fresh aliquots are assayed by SMS for:
 - Glycosylated hemoglobin (HA1c) – this MIDUS biomarker requires whole blood that is fresh or has been refrigerated for just a few days thus it is conducted in Japan.
 - Life Style Assessments – these are routine tests performed as a part of clinic visits in Japan and include: tests of cholesterol, HDL and LDL cholesterol, tryglycerides, liver function (GPT, gamma GPT, GOT), kidney function (BUN, uric acid), blood glucose, and anemia (e.g. red cell count, hematocrit).
- Frozen aliquots were packaged and shipped to the MIDUS BioCore lab at the University of Wisconsin. Samples were shipped to the U.S. so they could be assayed at the same labs that were used for MIDUS biomarker assays.

Details about the methods used to assay the tissue samples appear in Section D. This section includes details about assay method and sensitivity for inclusion in manuscripts, as well as information about any changes in assay method and subsequent corrections to the data.

Assays corresponding to MIDUS measures are listed first followed by the Lifestyle assays done at the Syowa Laboratory in Tokyo. A table summarizing assay ranges, reference ranges, and

intra- and inter-assay co-variation appears at the end of this section.

Please also note the following:

- Variable names for assays performed in the U.S begin with the unique 3 character set “J2B”.
- Although saliva samples are collected at home details about the saliva cortisol assay and sensitivity are also include in Section D.
- Variable names for the saliva data begin with the unique 3 character set “J2S”.

Medication Data

Participants are instructed to bring medications or information about medications to the clinic visit. At the end of the visit staff record medication names, dosage, route of administration, frequency, how long the participant has been taking the medication and why they think they are taking it. A copy of the form used to collect this information and additional details about data collection and processing are included in Section E along with details about the structure of the data and basic processing.

MIDJA medication data are also processed (i.e. reasons for taking medications are coded, therapeutic and pharmacologic class codes are added) according to a standardized set of procedures developed with the MIDUS Biomarker Medication data. ***These protocols are described in a separate document that applies to data from both studies. (See Documentation for MIDUS and MIDJA Medication Data).***

SECTION B

CLINIC VISIT FORM AND INSTRUCTIONS

CLINIC VISIT RECORD FORM

#ID _____

DATE _____

NAME _____

◆ Record of Last Meal :

When did you have a meal last time?

DATE: _____ TIME: _____

◆ Record of Body Measurement :

HEIGHT (cm)	WEIGHT (kg)

WAIST (cm)	ABDOMINAL GIRTH (cm)	HIP (cm)

BLOOD PRESSURE 1 (high/low)	BLOOD PRESSURE 2 (high/low)	BLOOD PRESSURE 3 (high/low)

◆ Blood Sample :

① Took blood → ☐ Yes ☐ No

(Reason : _____)

② Date and time of taking blood → Date: _____, Time: _____

Data Collection Protocols: Vital Signs and Morphometrics

The following provides a general overview of the steps completed by project staff to obtain the indicated measurements. More detailed instructions are provided at item B, below as appropriate.

A. General Instructions:

1. *Hip and Waist:* measured using a Gulik II Tape measure according to the detailed according to the instructions below
2. *Weight and Height:*
 - a. For weight measurement, participants should take off their shoes and empty their pockets.
 - b. They do not have to take off any other clothing.
3. *Blood Pressure:*
 - a. Have respondent sit quietly for 5 minutes
 - b. Measure blood pressure 3 times allowing a maximum of 30 seconds between each measurement.

B. Detailed Instructions: Hip & Waist Measurement

Project staff use a Gulik II Tape Measure to obtain hip and measurements. These measurements are recorded to 1 decimal place. The following standard is used for 'rounding':

If less than 0.05 (centimeters) round down

If greater than or equal to 0.05 (centimeters) round up

Measurements should be made directly on skin or over a single layer of clothing.

If, for some reason, these measurements have to be done over loose clothing, make sure to smooth the clothing as flat as possible DO NOT BUNCH the material.

Have participant stand erect with feet placed shoulder width apart and toes pointing forward.

1. Waist Circumference is measured directly on skin or over a single layer of clothing if the garment is a camisole or undershirt. DO NOT measure over a loose fitting blouse or shirt:
 - a. Place tape around narrowest point between ribs and the iliac crest (tips of the large bones of the pelvis).
 - b. Be sure the tape goes around evenly (parallel to the floor).
 - c. Record measurement to the nearest millimeter (1 decimal place).
2. Hip Circumferences is measured over a single layer of clothing, typically subject's underwear:
 - a. 1st circumference (Iliac Crest):
 - Ask subject to point to their hipbone.
 - Place the tape measure at the iliac crest and wrap around the body.
 - Make sure the measure is parallel to the floor.
 - Record measurement to the nearest millimeter (1 decimal place).
 - b. 2nd circumference (Maximum Extension):
 - Place the tape measure at the maximum diameter of the buttocks and wrap it around the body.
 - Stand to the side of the participant to see that the tape is placed at the point of maximum buttock extension.
 - Record measurement to the nearest millimeter (1 decimal place).

SECTION C

BLOOD COLLECTION AND PROCESSING PROTOCOLS

Blood Collection Protocol

Blood samples are collected in the order described below. Collect blood samples and process as follows:

- a. Preparation for blood draw
 - i. Use non-dominant arm if possible.
 - ii. Make reasonable number of attempts to get needed samples (e.g., 3 or so tries is generally sufficient – if unable to obtain samples, indicate this on Clinic Visit form, above)
 - iii. Subject should avoid strenuous activity before blood draw.
- b. Fill tubes in the following order and then process as indicated:
 - i. Three 8.5-ml SST (Serum Separator Tube) tubes, gently invert tube 3-5 times after draw.
 - ii. Two 1.8ml citrated tubes.
 - iii. One 2.0-ml FNa tube (whole blood for HA1c), gently invert tube 3-5 times after draw and cool at 4 degree.
 - iv. One 2.0-ml EDTA2K tube (for blood counts for lifestyle assessment), gently invert tube 3-5 times after draw and cool at 4 degrees.
- c. Complete the Clinic Visit Record Form
 - i. Record the time that the participant last ate, using 24-hour clock
 - ii. Record date and time blood draw began using 24-hour clock.
 - iii. Indicate if the blood draw was completed or not.
If no blood was drawn record the reason it was not collected.
 - iv. Record any problems encountered or other information regarding aspects of the collection that are not standard (per protocol).

Blood Sample Processing Protocol

Blood samples were processed by study staff on the University of Tokyo (UT) campus at the time of the clinic visit and then sent to Syowa Medical services for HbA1c testing, lifestyle assessments, and storage until shipment to the Biocore lab in Madison WI, USA, as indicated below.

1. FNa tube containing fresh blood is cooled at 4°C and tested for HA1c at Syowa.
2. EDTA2K tube containing fresh blood is cooled at 4°C and sent to Syowa for blood counts.
3. Two 1.8 ml Citrate tubes:
 - a. Centrifuge as soon as possible to separate plasma
 - i. Use refrigerated centrifuge (4°C).
 - ii. Centrifuge samples for 15 minutes.
 - iii. Set speed at 2000-3000 rpm.
 - iv. On form, record time centrifuge begun.
 - b. From two citrate tube, aliquot all plasma into two tubes, with 1.0ml plasma in each tube, apply blue label.
 - c. On form, indicate amount of plasma aliquoted into vial.
 - d. Store in a MIDJA freezer in designated freezer (-60 to -80 degrees) for delivery to Syowa for shipment to the US.
 - e. Record the time the specimens were stored in freezer on the form.
4. Three 8.5-ml SST tubes (Serum Separator Tube).
 - a. Let stand for 15-30 minutes after draw (maximum of 2 hours allowed between draw and centrifuging).
 - b. Centrifuge to separate sera at UT.
 - i. Use refrigerated centrifuge (4°C)
 - ii. Centrifuge samples for 10 minutes.
 - iii. Set speed at 2000-3000 rpm.

- iv. Record the time centrifugation was begun on the form.
- c. From three SST tubes, aliquot sera into two 10 ml vials (4 ml sera in each tube) for shipment to UW.
- d. Aliquot the remaining 2 or more ml of sera into a 10ml vial for Syowa.
- e. On form, indicate number of aliquots filled of each type.
- f. If none were filled or fewer than number specified were filled, please indicate why.
- g. Store two red capped tubes in MIDJA storage box in designated freezer (-60 to -80 degrees) for delivery to Syowa for shipment to the US. The remaining tube is kept at 4 degree and sent to Syowa for measurement of biochemical indicators at Syowa.
- h. Record the time specimens were stored in freezer on the form.

SECTION D

BLOOD ASSAY DOCUMENTATION

Blood Assay Descriptions
Assay Sensitivity Summary Table

MIDJA 1 BIOMARKER ASSAY DESCRIPTIONS

Overview

The following provides information about laboratory assays of tissue samples collected as part of the MIDJA Biomarker Protocol, including details about assay method and sensitivity for inclusion in manuscripts. If the assay method changed during the data collection period, information about the change and any corrections to the data are also provided. Assays are listed first by tissue source (blood, saliva), and then by physiological system assessed (cardiovascular, inflammatory etc). Each section begins with a brief overview of sample collection and processing. Information about the assays was provided by the lab performing the assay or was developed by Dr. Chris Coe's lab (i.e. MIDUS Biocore lab). The MIDJA protocol included a set of blood assessments (assays and cell counts), performed at Showa Medical Science, that were reported back to Japanese patients as part of a standard physical exam. A few of these assessments replicate MIDUS blood assays. Where appropriate, information about assays done in both locations is included below. A summary table listing all the assays along with the specimen type, assay type and sensitivity appears in Appendix A at the end of this document.

Information about corresponding assays in the MIDUS II Project 4 (Biomarker) protocol can be found in the "BloodUrineSaliva.pdf" documentation file in the public archive at ICPSR
<http://www.icpsr.umich.edu/icpsrweb/NACDA/studies/29282/documentation>

I. Blood Assays

A. Sample Collection:

Blood samples were collected from each participant at the clinic visit, which could occur at any time during the day. Participants were encouraged not to eat at least one hour before the visit. The last time they ate was recorded prior to the blood draw. To ensure consistency, all samples were collected and processed using standardized procedures. Frozen samples were stored in a -60° C to -80° C freezer until shipped on dry ice to the MIDUS Biocore Lab. Samples were subsequently stored in a -65° C freezer until assayed.

- *Whole blood* samples (sodium fluoride-anticoagulated) as well as freshly-separated sera, were refrigerated and delivered to the Showa Lab in Tokyo Japan within 24 hours of collection for
 - Complete blood count (CBC) and HA1c determination
 - Serum chemistry: Cholesterol (Total, HDL, LDL) Triglycerides, Glutamic oxaloacetic transaminase (GOT), Glutamic pyruvic transaminase (GPT), γ-Glutamyl transpeptidase (GGTP), Blood urea nitrogen (BUN), Uric acid (UA).
- *Frozen serum and plasma* samples were shipped to the MIDUS Biocore Lab monthly for the following biomarker assays:
 - Cardiovascular markers – Cholesterol, HDL Cholesterol
 - Hormone markers - DHEA and DHEA-S
 - Inflammation markers - IL-6, s-IL6-r, C-Reactive protein, Fibrinogen
 - Serum Creatinine

B1. Assay Details - Cardiovascular Markers

Glycosylated Hemoglobin (HA1c):

HA1c assays were performed at the Showa lab in Tokyo Japan. Glycosylated hemoglobin (HA1c) was measured using antibodies attached to latex particles, which specifically bind HA1c. Remaining free antibodies are agglutinated with a synthetic polymer. The change in turbidity is inversely related to the quantity of bound glycopeptides and is measured turbidometrically. Hemoglobin concentration in blood is determined by adding sodium lauryl sulfate (SLS) to anticoagulated blood to lyse the cells, thus releasing their hemoglobin into the plasma so that it can be measured colorimetrically. Percent HA1c is determined by dividing the concentration of HA1c by the total hemoglobin concentration

Comparability with MIDUS values:

The original MIDJA HA1c value can be used in analyses of MIDJA-only data, or for comparison to HA1c values from other Japanese studies. For comparison with U.S. data (MIDUS), however, two issues must be addressed: 1) MIDJA values were less than the MIDUS (by 0.4 - 0.8% percentage points) and, 2) the U.S. HA1c assay at Meriter labs changed twice over the course of MIDUS data collection and once since then.

To address the first issue, a small experiment was conducted to determine if the lower MIDJA values reflected differences in laboratory assay methods, or physiological variation. EDTA-anticoagulated blood was drawn from 10 individuals in Tokyo (4 in April 2010 and 6 in September 2010). Each sample was divided into two aliquots, one of which was assayed immediately for HA1c at the Showa lab, and one of which was sent to Madison and assayed within 1-2 days at Meriter Labs. From the two sets of data obtained on these ten samples a scatterplot (Figure 1, Appendix B) was made and a linear regression line generated: $y = 0.6026x + 2.6129$, where x is the value obtained in Tokyo and y is the value obtained in Madison. The coefficient of determination for this regression line is 0.6668.

To address the second issue, equations were obtained from the in-house comparisons at Meriter Labs to adjust their reported values to account for shifts occurring on May 22, 2006; February 29, 2007; and April 17, 2010^{26, 27, 28}.

- These three equations were combined to obtain the equation below to convert the 2010 Meriter-reported values (D) to bring them in line with the values in the MIDUS II data file (A):

$$A = 1.3849 * D - 2.1438$$

where D represents the values reported by Meriter after April 17, 2010 and A represents the values reported by Meriter before May 22, 2006

- These MIDUS-adjusted values were plotted against the Tokyo values, and a second scatterplot was obtained. From this plot, a second equation was obtained, which was used to convert the Tokyo values (J) to pre-5/22/06 Meriter values:

$$A = 0.8346 * J + 1.4748$$

These equations have a coefficient of determination of 0.6668. The comparison data and graphs are shown in Appendix B.

The data file includes the original value (J2CHBA1C) obtained from the Showa lab and the final MIDUS adjusted value (HA1c, MIDUS-adjusted).

Cholesterol & HDL Cholesterol:

Biocore Assays: The Cholesterol and HDL Cholesterol assays were performed at Meriter Labs (GML) (Madison, WI) using a Cobas Integra® analyzer (Roche Diagnostics, Indianapolis, IN).

Cholesterol: The instrument uses the enzyme cholesterol esterase to cleave cholesterol esters into free cholesterol and fatty acids. Cholesterol oxidase then catalyzes the oxidation of cholesterol to cholest-4-en-3-one and hydrogen peroxide. In the presence of peroxidase, this hydrogen peroxide effects the coupling of phenol and 4-aminoantipyrine to form a red quinone-imine dye. The color intensity of the dye is directly proportional to the cholesterol concentration. It is determined by measuring the increase in absorbance at 512 nm.¹

HDL-cholesterol: Serum is first mixed with synthetic polyanions, which adsorb to the surfaces of the other lipoproteins (LDL, VLDL, and chylomicrons); they are thereby transformed into detergent-resistant forms, whereas HDL is not. After solubilizing the HDL with detergent, it is measured as described above for total cholesterol.²

Showa Medical Science Assays: Cholesterol (Total, HDL, LDL) and Triglyceride assays were performed in Tokyo for Life Style Assessment reports that were sent to study participants. These values can be used in analysis of MIDJA-only data or for comparison to values from other Japanese studies.

Total serum cholesterol: This procedure employs the enzyme cholesterol esterase (CE) to cleave cholesterol esters into free cholesterol and fatty acids. Cholesterol oxidase (COD) then catalyzes the oxidation of cholesterol to cholest-4-en-3-one and hydrogen peroxide. In the presence of peroxidase (POD), the hydrogen peroxide effects the oxidation of a dye, causing a color change which can be measured colorimetrically.

HDL- and LDL- cholesterol: Each of these is isolated from the other lipoproteins, and then measured as described above for total cholesterol.

Triglycerides: Triglycerides are hydrolyzed to glycerol and fatty acids. Free glycerol is then phosphorylated to glycerol-3-phosphate, which in turn is oxidized by glycerol phosphate oxidase (GPO) to dihydroxyacetone phosphate and hydrogen peroxide. In the presence of the enzyme peroxidase (POD), the hydrogen peroxide oxidizes a dye, causing a color change which can be measured colorimetrically.

Comparability with MIDUS values-

Lipid profiles were run on sera from all 382 MIDJA participants in Tokyo (Showa lab). Frozen sera from these same participants were sent to Madison, where assays of HDL and total cholesterol were performed at Meriter Labs. These dual measurements were used to generate the scatter plots and linear regression lines shown in Appendix B (Figures 2-4) below. Across all three charts x values were obtained in Tokyo, while y values represent values obtained in the US as described below. Total Cholesterol values are plotted in the Figure 2.

The final 2 charts each include two sets of scatter plots. This was necessary due to a re-standardization of the HDL assay at Meriter in 2007^{3,4} while the MIDUS data collection was ongoing. The MIDUS HDL values obtained after this re-standardization were adjusted to be consistent with the values obtained before this occurred.

$$\text{Adjusted value} = 1.1423(\text{new value}) - 0.9028^4$$

For more information see the MIDUS BloodUrineSaliva.pdf in the public archive at:

<http://www.icpsr.umich.edu/icpsrweb/NACDA/studies/29282/documentation>). To facilitate comparison with the MIDUS data, this correction was also applied to the MIDJA values. The mathematical adjustment to the HDL values also made it necessary to generate a second set of values for the Ratio of Total/HDL Cholesterol. Thus, the figures for HDL Cholesterol (Figure 3) and the Ratio of Total/HDL Cholesterol (Figure 4) include scatter plots comparing the Tokyo values to the original US values reported by Meriter (US-MIDJA), as well as the values that were adjusted to bring them in line with the MIDUS data (US-MIDUS).

Thus the data file includes the following measures of Total and HDL Cholesterol and the Ratio of Total /HDL Cholesterol:

Measure	Variable names		
	Meriter Lab Value	MIDUS Adjusted Value	Showa Lab Value
Total Cholesterol	J2BCHOL	Not applicable	J2CTCHOL
HDL Cholesterol	J2BHDL	J2BHDLA	J2CHDL
Ratio Total/HDL Cholesterol	J2BRTHDL	J2BRTHDA	J2CRTHDL

Although the values are very similar, investigators are encouraged to use the Meriter Lab values for comparisons using U.S. samples and the MIDUS Adjusted values for comparison to the MIDUS sample.

B2. Assay Details – Hormone Markers

DHEA and DHEA-S assays are performed at the Associated Regional & University Pathologists (ARUP) laboratory (Salt Lake City, UT).

DHEA:

A radioimmunoassay was performed using kit #DSL8900 from Diagnostic Systems Laboratories (Webster, TX). The procedure follows the basic principle of radioimmunoassay where there is competition between a radioactive and a non-radioactive antigen for a fixed number of antibody binding sites. The amount of [I-125]-labeled DHEA bound to the antibody is inversely proportional to the concentration of the unlabeled DHEA present. The separation of free and bound antigen is easily and rapidly achieved using a double antibody system.⁵

On May 18, 2009, ARUP began using LC-MS/MS (Liquid Chromatography tandem Mass Spectrometry) to assay DHEA.⁶ Data collection began in January 2009; thus the initial 100 samples were assayed under the old method and the remainder under the new method. To maintain consistency with MIDUS data which were assayed under the earlier method, DHEA values were adjusted, as follows, to bring the new values in line with the existing data:

$$\text{Adjusted value} = 1.6145(\text{new value}) + 0.4668^7$$

DHEA-Sulfate:

This assay was performed with a Roche Modular Analytics E170 analyzer, using an Elecsys® kit (Roche Diagnostics, Indianapolis, IN).

By incubating the serum with a DHEA-S specific biotinylated antibody, an immunocomplex is formed, the amount of which is dependent upon the DHEA-S concentration in the specimen. After addition of streptavidin-coated microparticles and a DHEA-S derivative labeled with a ruthenium complex, the still-vacant sites of the biotinylated antibodies become occupied, with formation of an antibody-hapten complex. The entire complex becomes bound to the solid phase via interaction of biotin and streptavidin.

The reaction mixture is aspirated into a measuring cell where the microparticles are magnetically captured onto the surface of an electrode. Unbound substances are removed. Application of a voltage to the electrode then induces chemiluminescent emission, which is measured by a photomultiplier.⁸

B3. Assay Details – Inflammation Markers

IL-6 and IL-6sr were assayed in the MIDUS Biocore Laboratory (University of Wisconsin, Madison, WI). The fibrinogen and CRP assays are performed at the Laboratory for Clinical Biochemistry Research (University of Vermont, Burlington, VT).

IL6:

IL6 was measured using the Quantikine® High-sensitivity ELISA kit #HS600B (R & D Systems, Minneapolis, MN). This is a sandwich ELISA using a microplate precoated with a monoclonal antibody specific for IL6. Standards and samples are pipetted into the wells, and any IL6 present is bound by the immobilized antibody. After washing away the unbound substances, an alkaline phosphatase-labeled detection antibody specific for IL6 is added to the wells. Following a wash to remove any unbound antibody-enzyme reagent, a substrate (NADPH) is added, which is converted to NADH. After an incubation period, an amplifier solution containing two additional enzymes whose actions are coupled to the cycling of NADH and NAD⁺ (diaphorase and alcohol dehydrogenase) and their respective substrates (iodonitrotetrazolium-violet and ethanol) are added. The diaphorase converts the iodonitrotetrazolium-violet to formazan, a red-colored product. The reaction is stopped at a predetermined endpoint with sulfuric acid, and the absorbance, which is proportional to the concentration of IL6 in the sample, is read at 490 nm using a Dynex MRXe plate reader (Magellan Biosciences, Chantilly, VA).⁹

Soluble Receptors for IL6 (IL6-sr):

Concentration of IL6-sr was measured using the Quantikine® ELISA kit #DR600 (R & D Systems, Minneapolis, MN). This is a sandwich ELISA using a microplate precoated with a monoclonal antibody specific for IL6-sr. Standards and samples are pipetted into the wells, and any IL6-sr is bound by the immobilized antibody. After washing away the unbound substances, a horseradish peroxidase-labeled detection antibody specific for IL6-sr is added to the wells. Following a wash to remove any unbound antibody-enzyme reagent, a substrate (tetramethylbenzidine) is added to the wells, and a blue-colored product develops. This reaction is stopped at a predetermined endpoint using sulfuric acid, which changes the color to yellow. Absorbance is read at 450 nm using a Dynex MRXe plate reader (Magellan Biosciences, Chantilly, VA), and is proportional to the concentration of IL6-sr in the samples.¹⁰

Fibrinogen:

Fibrinogen antigen was measured using the BNII nephelometer (N Antiserum to Human Fibrinogen; Dade Behring Inc., Deerfield, IL). The amount of fibrinogen present in the sample is quantitatively determined by immunochemical reaction. Complexes formed between antigen and antibody molecules scatter light passing through the sample. The intensity of the scattered light is proportional to the concentration of the antigen (fibrinogen) in the sample.¹¹

C-reactive protein (CRP):

CRP was measured using the BNII nephelometer from Dade Behring utilizing a particle enhanced immunonephelometric assay. Polystyrene particles are coated with monoclonal antibodies to CRP, which, in the presence of antigen (CRP) agglutinate to cause an increase in the intensity of scattered light. The increase in scattered light is proportional to the amount of CRP in the sample.¹¹

UPDATE - Samples falling below the assay range for CRP by this method were re-assayed by immunoelectrochemiluminescence using a high-sensitivity assay kit (Meso Scale Diagnostics #K151STG)³⁰.

B4. Assay Details – Serum Creatinine

Creatinine was measured using a Cobas Integra® analyzer (Roche Diagnostics, Indianapolis, IN).

Serum Creatinine:

This assay employs the enzymes creatininase, creatinase, and sarcosine oxidase which react with creatinine and produce hydrogen peroxide as one of the end products. This reacts with aminophenazone and HT1B to form a quinone imine chromogen as an end product. The absorbance of this colored end product is measured at 552 nm and is directly proportional to the creatinine concentration in the serum.¹²

B5. Assay Details – Japanese Life Style Assessments

In Japan clinic visits routinely include collection of blood samples for assessment of life-style related diseases. Serum samples, refrigerated never frozen, were sent to Showa Medical Sciences for these assessments and a report of these results were sent to study participants. These results are also included in the MIDJA Biomarker data file and can be used with other MIDJA data and for comparison to other Japanese samples. In addition to the HA1c, Cholesterol, and Triglyceride assays described above, the following measurements of liver and kidney function were obtained along with a complete blood count::

Liver Function: Glutamic oxaloacetic transaminase (GOT) , Glutamic pyruvic transaminase (GPT),
γ-Glutamyl transpeptidase (GGTP)

Kidney Function: Blood Urea Nitrogen (BUN), Uric Acid (UA)

Liver Function Assays:

Glutamic oxaloacetic transaminase (GOT): In this assay, aspartate and α-ketoglutarate are mixed with serum, and the GOT in the serum catalyzes the conversion of these substrates to glutamate and

oxaloacetate. The oxaloacetate is then converted to malic acid by the enzyme malate dehydrogenase; this reaction consumes NADH, whose disappearance can be monitored by measuring UV absorbance at 340 nm.

Glutamic pyruvic transaminase (GPT): Alanine and α -ketoglutarate are mixed with serum, and the GPT in the serum catalyzes the conversion of these substrates to glutamate and pyruvate. The pyruvate is then converted to lactate by the enzyme lactate dehydrogenase; this reaction consumes NADH, whose disappearance can be monitored by measuring UV absorbance at 340 nm.

γ -Glutamyl transpeptidase (GGTP): A donor substrate, (γ -L-Glutamyl)-3-carboxy-4-nitroanilide, and an acceptor substrate are mixed with serum; the GGTP in the serum catalyzes the formation of 5-amino-2-nitrobenzoic acid, whose appearance can be monitored by measuring light absorbance at 410 nm.

Kidney Function Assays:

Blood urea nitrogen: This is a coupled enzymatic assay employing urease to convert urea to ammonium carbonate, and glutamate dehydrogenase (GLDH) and α -ketoglutarate to convert the ammonium ion to glutamic acid. The latter reaction consumes NADH, whose disappearance can be monitored by UV absorbance at 340 nm.

Uric acid: The enzyme uricase converts uric acid to allantoin, carbon dioxide, and hydrogen peroxide. The hydrogen peroxide product is reduced to water by the enzyme peroxidase (POD), and this reaction is coupled to an indicator reaction which can be monitored photometrically.

Complete Blood Count (CBC):

Hematocrit, Hemoglobin, Red blood cells, Mean cell volume, Mean cell hemoglobin, Mean cell hemoglobin concentration, White blood cells, Platelets: These measurements were automated.

II. Saliva Assays

A. Sample Collection:

Saliva samples were collected by participants in their homes over a 3 day period following the clinic visit. Three samples (morning, midday, evening) were collected each day. Samples are then frozen and shipped to the MIDUS Biocore lab for storage and subsequent cortisol assay.

B1. Assay Details – Saliva Cortisol

Salivary Cortisol:

Saliva samples were assayed at Dr. Clemens Kirschbaum's laboratory at the Technical University of Dresden, Germany. The samples for this assay were collected on cotton swabs in salivettes (Sarstedt Cat. #51.1534) and frozen. At the time of assay, they were thawed and centrifuged at 3000 rpm for 5 min, resulting in a particulate-free, clear fluid of low viscosity. Concentrations of free cortisol (the only type found in saliva) were determined using an immunoluminescence assay (kit #RE62011 manufactured by IBL International, Hamburg, Germany). Briefly, this assay uses a detection antibody conjugated to an agent capable of oxidizing luminol to 3-aminophthalic acid; this reaction emits light, which can be quantified, and which is proportional to the concentration of cortisol in the sample.^{13, 14}

APPENDIX A: MIDJA ASSAY SENSITIVITY SUMMARY TABLE

A. MIDJA Bioassays from blood samples.

Assay	Assay Type	Performed at:	Assay Range	Variability	Reference Range																		
Hb(blood)	SLS-Hb method	Showa	0-25 g/dL	inter-assay CV: 1.0%	Male:13.5-17.6 Female::11.3-15.2

SECTION E

MEDICATION DATA

Medication Data Collection and Processing Protocol

Data File Structure:

Administrative Variables

Prescription and Quasi Medications

Medication Allergies & Coding

Therapeutic and Pharmacologic Classes

Appendix A: Medication Chart

Appendix B: Generic Medication Names and DrugIDs

Appendix C: Reasons for Taking Medication – Codes and Category Names

Appendix D: Therapeutic and Pharmacologic Class Codes and Names

MEDICATION DATA COLLECTION AND PROCESSING PROTOCOLS

The MIDJA Biomarker data includes details about medications study participants are taking at the time of the clinic visit. Specifically information is recorded about the following:

- Prescription Medications
- Quasi Medications (i.e. non-prescription medications, equivalent to Over-The-Counter (OTC) and Alternative Medications in the U.S.)
- Medication Allergies

The Medication data appear at the end of the data file immediately following the Saliva data. A copy of the Medication Chart is included in Appendix A below. As described in “MIDJA Biomarker Data File Notes”, the naming convention organizes variables according to the data type or method used for data collection. The variable names for the medication data begin with the unique 3 character set “J2M”.

The remainder of this section provides general information about data collection as well as the structure and content of the medication data. The following also includes references to additional variables related to reasons for taking medications as well as therapeutic and pharmacologic class variables added to the data file following linkage to the Lexi-Data database. ***These variables are created using procedures that are applied to both MIDUS and MIDJA medication data, thus details are included in a unified document, ‘Documentation for MIDUS and MIDJA Medications’ that can be used for both studies.*** Appendices B, C, and D below contain lists of medication names and corresponding drugIDs, and coding schemes related to reasons for taking medications along with lists of therapeutic and pharmacologic class codes and category names, respectively. Note, these lists are based on medication data collected in both MIDJA and MIDUS, thus some items listed may not appear in the MIDJA data.

Data Collection

In Japan, to help manage medications hospitals provide lists of medications individuals are taking and pharmacies also provide descriptions of medications. Thus, participants were asked to bring all their medications to the clinic or the list of medications provided by a hospital. We do this to ensure that we are able to record medication names and dosages accurately. Staff recorded detailed information (medication name, dosage, etc.) on the medication chart. If a participant did not bring medications or a list, staff asked participants about medication use and recorded their responses. The Medication Chart has three pages and includes sections to record information about:

- Prescription Medications: Medications prescribed by someone authorized/licensed in Japan, typically a physician.
- Quasi Medications: that include vitamins, minerals, non-prescription pain, antacids, anti-diarrheas, fiber, lubricating eye or nose preparations etc. as well as other supplements, herbs and homeopathics that the participant uses regularly and can be purchased “Over the Counter” (OTC) without a prescription.
- Medication Allergies: Any medication (prescription, OTC, alternative) that the participant reports being allergic to.

At the end of the visit project staff record the following information about medications on the medication chart:

- Medication name, dosage, and route of administration

- How often the medication is taken
- How long the participant has been taking a given medication
- Why they think they are taking the medication

NOTE: The order in which medications are recorded on the form is random and determined by the order in which the participant chooses to report them. Thus there will be little direct correspondence between the medications or medication allergies reported in any given row of the form from wave to wave within a study or between MIDUS and MIDJA. The one exception is the first two rows in the Quasi section (OTC in MIDUS) which, as noted above, are reserved for reporting multi-vitamin and calcium supplement usage.

Data File Structure

The medication data are released in the traditional flat (wide) format as part of the larger MIDJA Biomarker aggregate data file to facilitate their use in standard between person analyses. Details about the variables in this file are included in the current document. The scope of the medication data however also lends itself to within person analysis of medication use, thus the medication data are also released in a standalone stacked (long) format. The stacked file only contains data about medications used, thus it does not include any information about study participants who do not take any medications. It also does not include any data about medication allergies. Details about the stacked file can be found in the Documentation for MIDUS and MIDJA Medications.

The aggregate (flat) file includes some administrative variables indicating whether or not the participant takes medication of the indicated type and, in some instances if yes, the number of medications. It also includes a standardized variable set characterizing each medication recorded along with information about medication allergies. The final section of the medication data is a set of variables indicating therapeutic and pharmacologic classification of the medications reported. The remainder of this section provides additional details about these variables.

Administrative Variables

There are 3 administrative variables at the beginning of the medication section:

- J2MTM – total number of medications
- J2MPMD – Yes/No, taking any prescription medications?
- J2MQMD – Yes/No, taking any quasi medications?

The first variable at the beginning of the Prescription and Quasi medication indicates the total number of medications of a given type that the participant takes (J2MPM, J2MQM, respectively). In addition, as noted above, the first two rows of the Quasi medication section are designated for Multivitamins and Calcium Supplements, thus it also includes the following 2 administrative variables:

- J2MQMV - Yes/No, taking a multivitamin?
- J2MQCS - Yes/No, taking a calcium supplement?

Prescription and Quasi Medications: Standardized Variable Sets

These variables appear in the following order for each medication reported. The “_” in the variable name is a place holder for the character indicating the medication type (P = Prescription, Q = Quasi) while the “#” at the end of the variable names is a place holder for the row number on the chart where information about a given medication is reported.

- Created variables from the Lexi-Data database (see Documentation of MIDUS and

MIDJA Medications for details, See Appendix B for a list of medication names and DrugIDs):

J2M_MID# - DrugID from the Lexi-Data database

J2M_GN# - Generic Drug Name associated with the DrugID

- Based on information from the medication chart:
J2M_DD#, J2M_DU# – drug dosage (dosage, units)
J2M_R# - route of administration (i.e. oral, inhaled, etc.)
J2M_F#, J2M_FU# – how often the medication is taken (frequency, frequency units)
J2M_T#, J2M_TU# – how long has the medication been taken (number, time units)
- Mutually exclusive code variables representing the reasons why the participant thinks s/he is taking the medication (See Documentation of MIDUS and MIDJA Medications for details about the coding process, See Appendix C below for a list of codes and category names):
J2M_ICD9M -- 3 digit numeric codes representing major categories in the International Classification of Diseases, 9th Revision.
J2M_MDC – 5 character alphanumeric variables representing a set of codes used to code reasons for taking a medication that could not be classified into an ICD-9 category

There are 13 sets of Prescription medication variables and 10 sets of Quasi medication variables in the MIDJA 1 Biomarker file. A few participants report more medications in a given category than the data file allows for (i.e. takes 13 Quasi medications). These additional medications are not included in the flat file as they would potentially add over a hundred variables (10 variables per medication) most of which would be designated as INAPP. These additional medications are however included in the stacked file. Cases with additional medications can be identified by looking at the frequency distribution for the number of Prescription (J2MPM) and Quasi (J2MQM) medications.

Medication Allergies

The final section of the Medication Chart is for reporting medication allergies. There are 2 administrative variables at the beginning of that section:

- J2ML – Yes/No does the respondent have Any Medication Allergies?
- J2MLM – number of allergies

There are 2 additional variables for each medication allergy reported (the # in the variable name indicates the row number in the chart):

- J2MLN# – text variable listing the medication name as reported by the participant
- J2MLRC# - Codes representing the allergic reaction to the medication (see below for details).

Note, the allergy variables are only included in the Flat file.

Coding Medication Allergy Reactions

Participant descriptions of allergic reactions to medications were recorded verbatim. The number of medication allergies reported was relatively small compared to the larger set of medication data thus they were coded using standard manual approaches. Medical definitions of common types of reactions and anaphylactic shock were used as a reference for making decisions about coding categories. Most of the categories correspond to specific individual

reactions reported (e.g. rash, nausea). If the participant reported multiple individual reactions that are part of the overall anaphylactic response then the code for anaphylaxis was assigned. Sometimes participants reported reactions that could not be identified as being either part of the anaphylactic response or a known reaction to a particular medication. In those instances the reaction was coded as 'Other'. The categories, codes, and key words are summarized below. Note, the same set of category codes is used for both MIDJA and MIDUS thus some categories (i.e. psychosis) may not appear in all files.

Code	Category Name	Keywords
1	ANAPHYLAXIS	Anaphylaxis, difficulty breathing, faint, wheezing, swelling & hives, sweating/shaking
2	RASH	Rash, Eczema
3	HIVES	Hives, eruptions, urticaria, blisters, welts
4	VOMITING	Vomiting, throwing up,
5	SWELLING	Swelling, swollen –hands, face, feet etc.
6	STOMACH UPSET	Upset stomach, feeling sick
7	ITCHING	Itching,
8	NAUSEA	Nausea
9	PSYCHOSIS	Psychosis, hallucinations, agitation, delirium, jitters
10	OTHER	Joints ache, no energy, headache, sweats, constipation

Therapeutic and Pharmacologic Classes

The final section of the data file contains a series of variables indicating whether or not the participant takes medications in commonly occurring categories of therapeutic (TC) and pharmacologic (PC) classes identified following linkage to the Lexi-Data database (see Appendix D for a list of these category names and class codes). The Lexi-Data linkage and creation of these variables along with corresponding count variables are described in the Documentation of MIDUS and MIDJA Medication.

The variable names for these dummies incorporate the first 5-6 characters of the corresponding TC and PC variables as well as the numeric code for the TC or PC class. The variable label incorporates both the TC or PC class code and the category name. If a count variable was also created, then an "N" is added as the final character to the dummy variable name. For example a common parent (top tier) therapeutic class is 115=Nutritional Products. The dummy and count variables for this TC class are named/labeled as follow:

Dummy variable: J2MTC_115 = 'Multum Therapeutic Class 115 - nutritional products: YES/NO?'

Count variable: J2MTC_115_N = 'Multum Therapeutic Class 115 – nutritional products: HOW MANY?'

APPENDIX B: GENERIC NAMES and DRUGIDs

The following lists the Lexi-Data DrugIDs and Generic Names in the MIDUS and MIDJA data files as of May 2017. The list is in order by DrugID and will be updated as needed with future data releases.

DRUG_ID	GENERIC_NAME		
d00001	acyclovir	d00096	cephalexin
d00002	amiodarone	d00097	clarithromycin
d00004	atenolol	d00101	isoniazid
d00006	captopril	d00102	itraconazole
d00011	ciprofloxacin	d00106	methenamine
d00012	codeine	d00108	metroNIDAZOLE
d00013	enalapril	d00110	minocycline
d00015	ibuprofen	d00112	nitrofurantoin
d00016	labetalol	d00117	pyrazinamide
d00018	nadolol	d00124	sulfamethoxazole-trimethoprim
d00019	naproxen	d00132	hydrALAZINE
d00021	ranitidine	d00134	metoprolol
d00022	warfarin	d00135	minoxidil
d00023	allopurinol	d00137	pindolol
d00024	azaTHIOprine	d00138	prazosin
d00025	chloramphenicol	d00140	cimetidine
d00027	haloperidol	d00141	famotidine
d00028	ketoprofen	d00142	theophylline
d00031	probenecid	d00143	phenytoin
d00032	propranolol	d00144	nortriptyline
d00033	sulindac	d00145	desipramine
d00034	zidovudine	d00146	amitriptyline
d00037	doxycycline	d00148	diazepam
d00039	indomethacin	d00149	LORazepam
d00043	clindamycin	d00150	colchicine
d00044	cloNIDine	d00151	bacampicillin
d00045	diltiazem	d00164	adenosine
d00046	erythromycin	d00168	ALPRAZolam
d00047	rifampin	d00169	aMILoride
d00048	verapamil	d00170	aspirin
d00049	acetaminophen	d00175	benztropine
d00050	methadone	d00176	betaxolol
d00051	NIFEdipine	d00179	bumetanide
d00056	cefuroxime	d00181	buPROPion
d00058	carBAMazepine	d00182	busPIRone
d00060	methotrexate	d00191	chlorpheniramine
d00061	lithium	d00192	chlorthalidone
d00068	ethambutol	d00193	cholestyramine
d00069	tobramycin	d00197	clonazePAM
d00070	furosemide	d00198	clorazepate
d00071	fluconazole	d00207	dextromethorphan
d00078	didanosine	d00210	digoxin
d00079	cycloSPORINE	d00212	diphenhydrAMINE
d00083	valproic acid	d00213	dipyridamole
d00084	prednisoLONE	d00217	doxepin
d00086	amantadine	d00223	epoetin alfa
d00088	amoxicillin	d00227	ethosuximide
d00089	amoxicillin-clavulanate	d00231	felodipine
d00091	azithromycin	d00233	fentaNYL
		d00234	flecainide

d00236	FLUoxetine	d00381	tamoxifen
d00237	fluPHENAZine	d00384	temazepam
d00241	folic acid	d00386	terazosin
d00242	fosinopril	d00395	traZODone

d05413	solifenacin	d07130	naproxen-SUMatriptan
d05414	natalizumab	d07132	olopatadine nasal
d05421	eszopiclone	d07137	dabigatran
d05422	darifenacin	d07315	glutamine
d05436	insulin detemir	d07347	bifidobacterium infantis
d05471	alpha-D-galactosidase	d07349	lacosamide
d05488	pramlintide	d07354	silodosin
d05508	pregabalin	d07356	rivaroxaban
d05526	alendronate-cholecalciferol	d07373	d-xylitol
d05529	exenatide	d07374	bimatoprost topical ophthalmic
d05578	ramelteon	d07395	dexlansoprazole
d05583	APAP/dextromethorphan /phenylephrine	d07397	febuxostat
d05635	metFORMIN-pioglitazone	d07400	bifidobacterium-lactobacillus
d05637	lactobacillus rhamnosus GG	d07409	prasugrel
d05646	saccharomyces boulardii lyo	d07466	liraglutide
d05702	methylsulfonylmethane	d07482	bepotastine ophthalmic
d05703	chondroitin/glucosamine /methylsulfonylmethane	d07498	amLODIPine-telmisartan
d05719	ranolazine	d07505	copper
d05748	brewer's yeast	d07637	pitavastatin
d05770	omeprazole-sodium bicarbonate	d07639	acetaminophen/CPM /dextromethorphan/GG
d05776	iodine	d07640	denosumab
d05807	varenicline	d07645	onabotulinumtoxinA
d05819	diphenhydrAMINE-ibuprofen	d07659	caffeine-magnesium salicylate
d05825	darunavir	d07660	formoterol-mometasone
d05847	efavirenz/emtricitabine/tenofovir	d07668	amlodipine/hydrochlorothiazide /olmesartan
d05851	levocetirizine	d07693	aspirin-calcium carbonate
d05856	glimepiride-pioglitazone	d07705	lurasidone
d05896	sitaGLIPTin	d07709	metformin-saxagliptin
d05899	ciclesonide nasal	d07717	acyclovir-hydrocortisone topical
d05964	aloe vera	d07740	vilazodone
d06032	fluocinolone otic	d07754	azilsartan
d06214	collagen	d07764	famotidine-ibuprofen
d06297	paliperidone	d07767	linagliptin
d06370	turmeric	d07804	apixaban
d06392	wheat dextrin	d07831	tyrosine
d06507	cinnamon	d07876	mirabegron
d06649	calcium carbonate-magnesium chloride	d07885	aclidinium
d06652	strontium gluconate	d07891	icosapent
d06655	alpha-lipoic acid	d07902	linaclotide
d06662	amLODIPine-valsartan	d07905	teriflunomide
d06663	lisdexamfetamine	d07921	capsaicin-menthol topical
d06720	metFORMIN-sitaGLIPTin	d08070	ospemifene
d06833	acetaminophen-aspirin	d08079	dimethyl fumarate
d06842	armodafinil	d08080	canagliflozin
d06848	lutein	d08117	dolutegravir
d06852	maraviroc	d08187	umeclidinium
d06867	biotin	d08272	tavaborole topical
d06905	amlodipine-olmesartan	d08275	empagliflozin
d07048	raltegravir	d08349	diphenhydramine-naproxen
d07076	etravirine	d08362	olodaterol-tiotropium
		d99999	Unmatched, no generic name

APPENDIX C: REASON FOR TAKING MEDICATIONS – CODES AND CATEGORY NAMES

This Appendix contains two lists of codes representing reasons why participants think they are taking medications reported on the Medication Chart (See Appendix A above). The list of modified ICD-9 (__ICD9M) codes and category names is presented first and then the list of MIDUS (__MDC) codes and category names. See Section E above and the MIDUS-MIDJA Biomarker Medication Documentation for details about the coding process. The lists begin on the next page.

Modified ICD-9 Codes and Labels

The ICD9M category labels are based on clinical descriptions of diseases etc., thus this table also contains a column listing key words/common phrases indicating the conditions/symptoms etc. included in a given category.

ICD9M CODE	ICD9 CODE LABEL	Key Words/Common Responses
10	PRIMARY TUBERCULOUS INFECTION	Tuberculosis bacillus
41	BACT INF IN OTH DIS/NOS	Infectious disease
42	HUMAN IMMUNO VIRUS DIS	HIV
53	HERPES ZOSTER	Shingles
54	HERPES SIMPLEX	Cold sores, herpes
78	OTHER VIRAL DISEASE	Warts
79	VIRAL INFECTION	Anti-viral, viral infection
110	DERMATOPHYTOSIS	Athlete's foot, toe nail fungus, fungal infection, ringworm
112	CANDIDIASIS	Yeast infection
133	SCABIES	Scabies
135	SARCOIDOSIS	Sarcoidosis
150	MALIGNANT NEOPLASM OF ESOPHAGUS	Esophagus cancer
173	OTHER MALIGNANT NEOPLASM OF SKIN	Skin cancer
174	MALIG NEO FEMALE BREAST	Breast cancer
185	MALIGN NEOPL PROSTATE	Prostate cancer
188	MALIGN NEOPL BLADDER	Bladder cancer
209	NEUROENDOCRINE TUMORS	Neuroendocrine carcinoid cancer
211	BENIGN NEOPLASM OF OTHER PARTS OF DIGESTIVE SYSTEM	Colon polyp
212	BENIGN NEOPLASM OF RESPIRATORY AND INTRATHORACIC ORGANS	Thymoma
218	UTERINE LEIOMYOMA	Fibroids, myoma of uterus
239	UNSPECIFIED NEOPLASM	Cancer non-specific

ICD9M CODE	ICD9 CODE LABEL	Key Words/Common Responses
240	GOITER	Goiters-thyroid med, keeps goiters away
242	TOXIC DIFFUSE GOITER	Grave's disease
244	ACQUIRED HYPOTHYROIDISM	Hypothyroidism, thyroiditis
246	OTH DISORDERS OF THYROID	Thyroid hormone, thyroid
250	DIABETES MELLITUS	Diabetes, high blood sugar
251	OTH PANCREATIC DISORDER	Hypoglycemia
255	ADRENAL GLAND DISORDERS	Adrenal gland disorder, adrenal gland dysfunction
256	OVARIAN DYSFUNCTION	Polycystic ovarian syndrome
257	TESTICULAR DYSFUNCTION	Low testosterone levels
259	OTH ENDOCRINE DISORDERS	Imbalance in endocrine system
266	B-COMPLEX DEFICIENCIES	Low B12
267	ASCORBIC ACID DEFICIENCY	Vitamin C deficiency
268	VITAMIN D DEFICIENCY	Rickets, low vitamin D, vitamin D deficiency
269	OTH NUTRITION DEFICIENCY	Iodine deficiency, calcium deficiency
272	PURE HYPERCHOLESTEROLEM	High cholesterol, hyperlipidemia, high neutral lipid,
274	GOUT	Gout
275	DIS MINERAL METABOLISM	Magnesium supplement, reduce phosphate, supplement iron
276	FLUID/ELECTROLYTE DIS	Low potassium, hypokalemia
279	DISORDER OF IMMUNE MECHANISM	Autoimmune disease
280	IRON DEFICIENCY ANEMIA	Iron deficiency
281	PERNICIOUS ANEMIA	Pernicious anemia
285	ANEMIA NEC/NOS	Anemia
287	PURPURA & OTH HEMOR COND	Low platelet count
295	SCHIZOPHRENIC DISORDERS	Schizophrenia
296	AFFECTIVE PSYCHOSES	Bipolar disorder, mood swings

ICD9M CODE	ICD9 CODE LABEL	Key Words/Common Responses
297	DELUSIONAL DISORDERS	Hallucinations, paranoia, ease up on symptoms of delusion
298	OTH NONORGANIC PSYCHOSES	Psychosis
300	NEUROTIC DISORDERS	Tranquilizer, stay calm, anxiety, nervousness, stabilizer
302	SEXUAL DISORDERS	Impotence, erectile dysfunction
303	ALCOHOL DEPENDENCE	Preventing craving alcohol
304	DRUG DEPENDENCE	Heroin addiction maintenance
305	NONDEPENDENT DRUG ABUSE	Smoking cessation
308	ACUTE REACTION TO STRESS	Stress
309	ADJUSTMENT REACTION	PTSD
311	DEPRESSIVE DISORDER NEC	Depression, anti-depressant
314	HYPERKINETIC SYNDROME	ADD, ADHD
323	ENCEPHALITIS, MYELITIS, AND ENCEPHALOMYELITIS	Myelitis
331	CEREBRAL DEGENERATION	Alzheimer's
332	PARKINSON'S DISEASE	Parkinson's disease
333	EXTRAPYRAMIDAL DIS NEC	Restless leg syndrome, tick in eye, tremors, Huntington's disease
337	AUTONOMIC NERVE DISORDER	Treat disorder of peripheral nerve, neuropathy in heart
338	PAIN, NOT ELSEWHERE CLASSIFIED	Pain, pain in multiple locations,
340	MULTIPLE SCLEROSIS	MS, Multiple sclerosis, muscle fatigue
345	EPILEPSY	Epilepsy, seizure disorder, focal seizures
346	MIGRAINE	Migraine
347	CATAPLEXY AND NARCOLEPSY	Narcolepsy
349	CNS DISORDER NEC/NOS	Neurological problems
350	TRIGEMINAL NERVE DISORDERS	Trigeminal neuralgia

ICD9M CODE	ICD9 CODE LABEL	Key Words/Common Responses
354	CARPAL TUNNEL SYNDROME	Carpal tunnel syndrome
356	HERED & IDIOPATH PERIPH NEUROPATHY	Improvement of peripheral nervous system
358	MYONEURAL DISORDERS	Myasthenia gravis
361	RETINAL DETACHMENTS AND DEFEATS	Retinal detachment
362	RETINAL DISORDERS NEC	Macular degeneration
365	GLAUCOMA	Glaucoma, pressure in eye, lower ocular pressure
366	CATARACT	Cataract
370	KERATITIS	Ulcer in eye
371	CORNEAL OPACITY/DISORDER	Corneal problem
372	DISORDERS OF CONJUNCTIVA	Prevent eye infection
373	INFLAMMATION OF EYELIDS	Sty, blepharitis
375	LACRIMAL SYSTEM DISORDER	Dry eyes, lacrimal gland disorder
379	EYE DISORDERS NEC	Inflammation of eye, itchy eyes
380	DISORDER OF EXTERNAL EAR	Ear infection
386	VERTIGINOUS SYNDROMES	Meniere's disease, inner ear
388	DISORDERS OF EAR NEC	Ringings ears, tinnitus, ear pain, dry ear
389	HEARING LOSS	Helps with hearing, hearing loss
401	ESSENTIAL HYPERTENSION	High blood pressure, hypertension, reduce/lower blood pressure, blood pressure, anti-hypertensive
410	ACUTE MYOCARDIAL INFARCT	Myocardial infarction, cardiac infarction
413	ANGINA PECTORIS	Angina pectoris, angina
414	OTH CHR ISCHEMIC HRT DIS	Arterial sclerosis
415	ACUTE PULMONARY HEART DISEASE	Heart pulmonary embolism
424	OTH ENDOCARDIAL DISEASE	Mitral stenosis, prolapsed mitral valve
427	CARDIAC DYSRHYTHMIAS	Irregular pulse, atrial fibrillation
428	HEART FAILURE	Heart failure

ICD9M CODE	ICD9 CODE LABEL	Key Words/Common Responses
429	ILL-DEFINED HEART DIS	Cardiac disease, heart dilation, dysraphism of aortic valve
431	INTRACEREBRAL HEMORRHAGE	Intracerebral hemorrhage, brain hemorrhage
434	CEREBRAL ARTERY OCCLUS	Cerebral infarction sequelae, cerebral thrombosis, mini stroke
435	TRANSIENT CEREB ISCHEMIA	TIA
440	ATHEROSCLEROSIS	Atherosclerosis
441	AORTIC ANEURYSM AND DISSECTION	Aortic aneurysm
442	OTHER ANEURYSM	Aneurysm
443	RAYNAUD'S SYNDROME	Raynaud's syndrome
446	POLYARTERIT NODOSA ET AL	Wegener's disease
447	OTHER ARTERIAL DISEASE	Twisted carotid artery, vasculitis
451	THROMBOPHLEBITIS	Recurring phlebitis
453	OTH VENOUS THROMBOSIS	Anticoagulant, thrombosis, prevent thrombosis, prevent blood clot, thrombus
455	HEMORRHOIDS	Hemorrhoids
458	HYPOTENSION	Low blood pressure
460	ACUTE NASOPHARYNGITIS	Treat Cold, acute upper respiratory infection
461	ACUTE SINUSITIS	Acute sinus problems, post nasal drip, nasal inflammation, nasal mucus
470	DEVIATED NASAL SEPTUM	Deviated septum
471	NASAL POLYPS	Polyps in sinus
472	CHR PHARYNG/NASOPHARYNG	Rhinitis, chronic nasal congestion, reduce swelling of nasal passages
473	CHRONIC SINUSITIS	Chronic sinus
477	ALLERGIC RHINITIS	Hay fever, dust allergy, allergic rhinitis
478	OTH UPPR RESPIRATORY DIS	Drippy/clogged nose
486	PNEUMONIA, ORGANISM NOS	Pneumonia

ICD9M CODE	ICD9 CODE LABEL	Key Words/Common Responses
487	INFLUENZA	Flu
490	BRONCHITIS NOS	Bronchitis
492	EMPHYSEMA	Emphysema
493	ASTHMA	Asthma, pulmonary emphysema, emphysema
496	CHR AIRWAY OBSTRUCT NEC	COPD
518	OTHER LUNG DISEASES	Repair damage to lung
519	OTHER DISEASES OF RESPIRATORY SYSTEM	Bronchial spasm prevention
523	GINGIVAL/PERIODONTAL DIS	Gum disease/problems
524	DENOFACIAL ANOMALIES	Temporomandibular joint disorders, TMJ
525	OTHER DENTAL DISORDER	Extracted teeth, treatment for a tooth, toothache
526	DISEASES OF THE JAWS	Root canal, root canal infection
527	SALIVARY GLAND DISEASES	Dry mouth
528	ORAL SOFT TISSUE DISEASE	Stomatitis, chapped lips, canker sores, dental abscess
529	TONGUE DISORDERS	Geographic tongue
530	DISEASES OF ESOPHAGUS	Acid reflux, GERD, gastritis, esophagus trouble, backward flow of gastric acid,
531	GASTRIC ULCER	Gastric ulcer
532	DUODENAL ULCER	Duodenal ulcer
533	PEPTIC ULCER, SITE NOS	Helicobacter pylori, gastric & duodenal ulcer, peptic ulcer
535	GASTRITIS AND DUODENITIS	Inflammation of stomach
536	STOMACH FUNCTION DISORD	Gastric hyperacidity, dyspepsia, neutralize/reduce gastric acid, stomach pain
553	OTHER ABDOMINAL HERNIA	Hernia, high hiatal hernia
555	REGIONAL ENTERITIS	Crohn's disease
556	IDIOPATHIC PROCTOCOLITIS	Colitis
558	OTH NONINF GASTROENTERIT	Diarrhea, gastroenteritis

ICD9M CODE	ICD9 CODE LABEL	Key Words/Common Responses
562	DIVERTICULA OF INTESTINE	Diverticulitis
564	FUNCT DIGESTIVE DIS NEC	Constipation, bowel movement, colon cramps, irritable bowel
569	OTH INTESTINAL DISORDERS	Intestinal disorder, inflammation of intestines, proctitis
571	CHR LIVER DIS/CIRRHOSIS	Liver disease, primary biliary cirrhosis
574	CHOLELITHIASIS	Gall stone
575	OTHER DISORDERS OF GALLBLADDER	Gallbladder polyp
579	INTESTINAL MALABSORPTION	Celiac disease nutrition
583	NEPHRITIS NOS	Lupus in kidneys
585	CHRONIC RENAL FAILURE	Kidney disease
586	RENAL FAILURE NOS	Renal failure
590	KIDNEY INFECTION	Kidney infection, antibiotics for kidney
592	RENAL/URETERAL CALCULUS	Kidney stones
593	OTH RENAL & URETERAL DIS	Prevention/help with renal insufficiency
596	OTHER BLADDER DISORDERS	Bladder tone, neurogenic bladder
599	OTH URINARY TRACT DISOR	Urinary tract infection, UTI
600	HYPERPLASIA OF PROSTATE	Prostatic hypertrophy, prostatic hyperplasia
601	PROSTATIC INFLAMMATION	Prostatitis, enlarged prostate, help reduce swelling of prostate
607	DISORDER OF PENIS	Due to prostate cancer/vitality
608	MALE GENITAL DIS NEC	Transitions
611	OTHER BREAST DISORDERS	Breast pain
616	INFLAMMATORY DISEASE OF CERVIX, VAGINA, AND VULVA	Vaginitis
625	FEMALE GENITAL SYMPTOMS	Dysmenorrhea, premenstrual tension
626	DISORDER OF MENSTRUATION	Menstrual pain, irregular period

ICD9M CODE	ICD9 CODE LABEL	Key Words/Common Responses
627	MENOPAUSAL DISORDERS	Menopausal disorder, balancing hormones, stabilizer for menopause, menopause
628	FEMALE INFERTILITY	Fertility, prepare uterus
682	CELLULITIS AND ABSCESS, UNSPEC	Cellulitis
686	OTHER LOCAL INFECTIONS OF SKIN AND SUBCUTANEOUS TISSUE	Skin palmoplantar pustulosis
690	ERYTHEMATOSQUAMOUS DERM	Dry scalp
691	ATOPIC DERMATITIS AND RELATED CONDITIONS	Atopic dermatitis
692	CONTACT DERMATITIS	Eczema, dermatitis, poison oak
695	ERYTHEMATOUS CONDITIONS	Rosacea, lupus
696	PSORIASIS/LIKE DISORDERS	Psoriasis
697	LICHEN	Lichen
698	PRURITUS & LIKE COND	Itch, itching
702	OTHER DERMATOSES	Actinic keratosis
704	HAIR & FOLLICLE DISEASE	Hair thinning
705	DISORDERS OF SWEAT GLANDS	Miliaria
706	SEBACEOUS GLAND DISEASE	Acne
707	CHRONIC ULCER OF SKIN	Sores in ears (hearing aid), sores under arms
708	URTICARIA	Hives, chronic urticaria
709	OTHER SKIN DISORDERS	Scar
714	RHEUMATOID & OTH INFLAMM POLYARTHROP	Rheumatoid arthritis, RA
715	OSTEOARTHROSIS ET AL	Osteoarthritis
716	ARTHROPATHIES NEC/NOS	Arthritis, arthritis pain
718	OTHER JOINT DERANGEMENT	Pain in hip
719	JOINT DISORDER NEC & NOS	Knee, shoulder, joint etc. pain or problem, athralgia,
721	SPONDYLOSIS AND ALLIED DISORDERS	Undifferentiated spondyloarthropathy
722	INTERVERTEBRAL DISC DIS	Degenerative spine condition

ICD9M CODE	ICD9 CODE LABEL	Key Words/Common Responses
723	OTHER CERVICAL SPINE DIS	Cervical vertebra pain, pinched nerve, neck pain
724	BACK DISORDER NEC & NOS	Back pain, sciatica, lumbar canal stenosis, back spasms
726	PERIPH ENTHESOPATHIES	Torn rotator cuff, tendonitis of jaw
727	OTH DIS SYNOV/TEND/BURSA	Bursitis
728	DIS OF MUSCLE/LIG/FASCIA	Muscle spasm
729	OTHER SOFT TISSUE DIS	Sore muscles, leg pain/cramps, muscle constriction, rheumatism
730	OSTEOMYELITIS, PERIOSTITIS, AND OTHER INFECTIONS INVOLVING BONE	Osteomyelitis
731	OSTEITIS DEFORMANS	Paget's disease, brittle bone
733	OTH BONE & CARTILAGE DIS	Osteoporosis, osteopenia, pain in bone, low bone density
745	CARDIAC SEPTAL CLOS ANOM	Foramen ovale
753	CONGENITAL ANOMALIES OF URINARY SYSTEM	Polycystic kidney disease
780	GENERAL SYMPTOMS	Sleep aid, night sweats, vasovagal syncope, sensitive to cold, stiff, giddy, insomnia, vertigo, memory problems
781	NERV/MUSCULSKEL SYS SYMP	Tremor
782	SKIN/OTH INTEGUMENT SYMP	Rash, numbness of feet/finger/legs, reduce keloidosis, reduce skin inflammation, edema
783	NUTRIT/METAB/DEVEL SYMP	Anorexia, weight loss, appetite suppressant
784	SYMPTOMS INVOL HEAD/NECK	Headache, sore throat
785	CARDIOVASCULAR SYS SYMP	Heart murmur
786	RESP SYS/OTH CHEST SYMP	Difficulty breathing, loosen phlegm, short breath, whooping cough, chest tightness
787	GI SYSTEM SYMPTOMS	Gassy, heartburn, nausea
788	URINARY SYSTEM SYMPTOMS	Urination disorder, frequent urination, urination trouble/problem, bladder control
789	OTH ABDOMEN/PELVIS SYMP	Stomach spasm, stomach cramp, groin pain

ICD9M CODE	ICD9 CODE LABEL	Key Words/Common Responses
790	NONSPECIFIC FINDINGS ON EXAMINATION OF BLOOD	High uric acid, hyperuricemia
795	ABN HISTOLOG/IMMUNO FIND	Positive TB test
797	SENILITY WITHOUT MENTION OF PSYCHOSIS	Memory
805	FRACTURE OF VERTEBRAL COLUMN WITHOUT MENTION OF SPINAL CORD INJURY	Broken back bone
904	INJURY TO BLOOD VESSELS OF LOWER EXTREMITY AND UNSPECIFIED SITES	Blood vessel injury
918	SUPERFICIAL INJURY OF EYE AND ADNEXA	Eye injury
919	SUPERFICIAL INJ OTH SITE	Blisters
957	INJURY TO NERVE NEC/NOS	Nerve damage
965	POIS-ANALGESIC/ANTIPYRET	Counteract Naproxen
993	EFFECTS OF AIR PRESSURE	Altitude sickness
994	EFFECT EXTERNAL CAUS NEC	Motion sickness
995	CERTAIN ADVERSE EFF NEC	Inflammation, food allergy, allergy (non-specific)
9996	UNABLE TO CLASSIFY	
9997	DON'T KNOW	
9998	MISSING	
9999	INAPP	

MIDUS Codes and Labels

To assist users in understanding the type of responses in the MIDUS code categories this table also contains a column listing key words/common phrases used to assign a response to a given category. Note all the MIDUS codes are alphanumeric and begin with an “M” followed by a 4 digit numeric code. The exception is the codes for Unable to Classify, Don’t Know, Missing, and INAPP which begin with a “Z” and the usual missing value codes.

MIDUS CODE	MIDUS CODE LABEL	Key words/Common Phrases
M1000	GENERAL HEALTH	Health, for health, maintain health
M1010	IMPROVE HEALTH	Improve health, strengthen the system, for healing, recovery from (cancer, surgery, etc.), getting better
M1020	ENERGY	Gives me a boost, when feel run down, increase energy, improve drive, when tired
M1030	GENERAL HEALTH, OTHERS	Beauty, aging, stay younger, detox, cleanse body
M1040	GENERAL HEALTH, PREVENTIVE	Preventive, prevention, prevent potential sickness
M2000	SUPPLEMENT	Supplement (just the word)
M2010	VITAMIN SUPPLEMENT	Lacking vitamins, to supply vitamins, get balance of vitamins
M2020	CALCIUM SUPPLEMENT	Calcium, need more calcium, don't drink milk
M2030	DIETARY SUPPLEMENT	Supplement diet, balance diet needs
M2040	ENSURE NUTRITIONAL INTAKES	Nutrient fortification, add nutrients, balance nutrition
M2050	POOR DIET	Diet, don't always eat well, dietary reasons
M2060	ANTIOXIDANT	Antioxidants, help with free radicals,
M2070	SUPPLEMENT, OTHERS	Iron pill, resupply iron, omega 3, fiber, probiotics
M3010	CARDIOVASCULAR HEALTH	Heart health, good for heart, cardiovascular health
M3011	CARDIOVASCULAR HEALTH, PREVENTIVE	Cardiac family history, prevent clots/stroke/heart attack/atherosclerosis
M3012	CARDIOVASCULAR HEALTH, BLOOD THINNER	Blood thinner
M3013	CARDIOVASCULAR HEALTH, OTHERS	Improve blood circulation, neutral fat,
M3020	MUSCULOSKELETAL HEALTH	Bone health, because of broken bones, health leg and hip

MIDUS CODE	MIDUS CODE LABEL	Key words/Common Phrases
M3021	BONE STRENGTH/DENSITY	Bone strength/density/loss/mass
M3022	JOINT HEALTH	Healthy joints, good for bones-joints, maintain bone and joint health
M3023	MUSCULOSKELETAL HEALTH, PREVENTIVE	Prevent bone loss, prevent osteoporosis
M3024	MUSCULOSKELETAL HEALTH, OTHERS	Repair muscles, get older legs weaken, bone/muscle
M3030	DIGESTIVE HEALTH	Digestion, break down food, help digest food, condition of my stomach
M3031	INTESTINAL/COLON HEALTH	Colon health, cleans out colon, regularity, to condition intestinal functions
M3032	STOMACH ACID	Stomach acid
M3040	PROSTATE HEALTH	Prostate health, prostate gland, prostate problem,
M3050	EYE HEALTH	Eye health, good for eyes, nutrients for eyes, tired eyes, eye problem, uveal tract
M3060	BRAIN HEALTH	Boost cognitive abilities, memory, good for your brain, brain health, brain function, avoid senile brain
M3070	IMMUNE HEALTH	Boost/support immune system, beneficial for immune system,
M3071	PREVENT COLDS	Prevent catching cold, improve sensitivity to colds
M3072	IMMUNOSUPPRESSION	Immunosuppressant, immunosuppressant after kidney transplant
M3080	INTEGUMENT HEALTH	Hair/Skin/Nail health, dry skin/hair, for skin, to avoid tanning/sunburn, liver spot, rough hands
M3090	OTHER TARGETED HEALTH	Low frequency reasons that cannot be assigned elsewhere (e.g. Multiple organ/system support (i.e. eye & bone, prevent cancer and strokes), bladder protection, protect liver from alcohol, liver, chronic illness)
M4010	MD RECOMMEND	Doctor suggested/prescribed/recommended/ "told me to"
M4020	GOOD FOR YOU/ME	Good for me/you, everyone says it's a good idea, healthy thing to do, heard it's good for you, saw on TV etc.

MIDUS CODE	MIDUS CODE LABEL	Key words/Common Phrases
M4030	FAMILY/FRIEND RECOMMEND	Friend, family member, mother, etc. recommended it, spouse puts it out
M5000	WEIGHT LOSS	Lose weight, weight management, diet plan pills
M5100	STRESS	For stress, helps with stress
M5200	CONTRACEPTION	Birth Control, prevent pregnancy
M5300	COUNTER/PREVENT DRUG SIDE EFFECTS	Counter the affects of statin, prevent side effect of Lipitor, help with side effects of atorvastatin, etc.
Z9996	UNABLE TO CLASSIFY	
Z9997	DON'T KNOW	
Z9998	MISSING	
Z9999	INAPP	

APPENDIX D: THERAPEUTIC AND PHARMACOLOGIC CLASS CODES AND NAMES

This Appendix contains two lists 1) Therapeutic Class (TC) codes and category names, and 2) Pharmacologic Class (PC) codes and categories included in the MIDUS and MIDJA data files as of May 2017. These lists will be updated as needed at future releases. See Section A above and MIDUS-MIDJA Biomarker Medication Documentation for details.

Therapeutic Class Codes and Names

The Therapeutic Classification (TC) system has three tiers consisting of a set of nested (parent-child) categories that parallels the ways in which clinicians think about medications. The system is polyhierarchical and each therapeutic class has a unique code. See Section B above for details. The list below is organized in nested in numeric order. The top tier (Parent/Grandparent) class codes are in the leftmost column. All middle tier (Parent/Child) class codes are listed under their top tier parent code. Similarly, all bottom tier (Child/Grandchild) class codes are listed under their middle tier “Parent” codes. All category names are listed in the rightmost column. Color coding is used to help illustrate the relationships among the therapeutic classes.

Multum Therapeutic Classes			
Top Tier (Parent/ Grandparent)	Middle Tier (Parent/ Child)	Bottom Tier (Child/ GrandChild)	Therapeutic Class Names
1			ANTI-INFECTIVES
	2		AMEBICIDES
	3		ANTHELMINTICS
	4		ANTIFUNGALS
		235	POLYENES
		236	AZOLE ANTIFUNGALS
		237	MISCELLANEOUS ANTIFUNGALS
	5		ANTIMALARIAL AGENTS
		238	ANTIMALARIAL QUINOLINES
		239	MISCELLANEOUS ANTIMALARIALS
	6		ANTITUBERCULOSIS AGENTS
		232	RIFAMYCIN DERIVATIVES
		234	MISCELLANEOUS ANTITUBERCULOSIS AGENTS
		457	HYDRAZIDE DERIVATIVES
	7		ANTIVIRAL AGENTS
		175	PROTEASE INHIBITORS
		176	NRTIS
		177	MISCELLANEOUS ANTIVIRALS

Top Tier (Parent/ Grandparent)	Middle Tier (Parent/ Child)	Bottom Tier (Child/ GrandChild)	Therapeutic Class Names
		227	NNRTIS
		229	PURINE NUCLEOSIDES
		281	NEURAMINIDASE INHIBITORS
		327	ANTIVIRAL COMBINATIONS

Pharmacologic Class Codes and Names

The Pharmacologic Classification (PC) system is flat thus the classes are in numeric order by class code. This system does not include parent/child relationships, but drugs can be assigned to multiple pharmacologic categories. Within MIDUS/MIDJA medications can be assigned to up to 6 PC categories. See Section A above and MIDUS-MIDJA Biomarker Medication Documentation for more details.

Multum Pharmacologic Classes	
Codes	Class Names
901	ACNE PRODUCTS
902	ACETYLCHOLINESTERASE INHIBITOR
903	ACETYLCHOLINESTERASE INHIBITOR (CENTRAL)
909	ADRENERGIC AGONIST AGENT
915	ALKALINIZING AGENT
918	ALPHA 1 AGONIST
919	ALPHA 1 BLOCKER
928	ALPHA-/BETA- AGONIST
930	ALPHA 2 -ADRENERGIC AGONIST
931	ALPHA 2 AGONIST, OPHTHALMIC
935	AMINOQUINOLINE (ANTIMALARIAL)
938	5-AMINOSALICYLIC ACID DERIVATIVE
943	ANALGESIC COMBINATION (OPIOID)
946	ANALGESIC, OPIOID
947	ANALGESIC NONOPIOID
951	ANALGESIC, TOPICAL
952	ANALGESIC, URINARY
953	ANALGESIC, MISCELLANEOUS
954	ANDROGEN
955	ANESTHETIC/CORTICOSTEROID
956	ANESTHETIC, TOPICAL
957	ANGIOTENSIN-CONVERTING ENZYME (ACE) INHIBITOR
958	ANGIOTENSIN II RECEPTOR BLOCKER
961	ANTACID
963	ANTHELMINTIC
971	ANTIANGINAL AGENT
973	ANTIANKXIETY AGENT, MISCELLANEOUS
976	ANTIARRHYTHMIC AGENT, CLASS IB
977	ANTIARRHYTHMIC AGENT, CLASS IC
978	ANTIARRHYTHMIC AGENT, CLASS II

Codes	Class Names
979	ANTIARRHYTHMIC AGENT, CLASS III
980	ANTIARRHYTHMIC AGENT, CLASS IV
983	ANTIARRHYTHMIC AGENT, MISCELLANEOUS
989	ANTIBIOTIC, AMINOGLYCOSIDE
994	ANTIBIOTIC, CEPHALOSPORIN (FIRST GENERATION)
995	ANTIBIOTIC, CEPHALOSPORIN (SECOND GENERATION)
998	ANTIBIOTIC/CORTICOSTEROID, OPHTHALMIC
1000	ANTIBIOTIC CORTICOSTEROID TOPICAL
1002	ANTIBIOTIC, MACROLIDE
1004	ANTIBIOTIC, OPHTHALMIC
1005	ANTIBIOTIC, ORAL RINSE
1008	ANTIBIOTIC, PENICILLIN
1009	ANTIBIOTIC, FLUOROQUINOLONE
1011	ANTIBIOTIC, SULFONAMIDE DERIVATIVE
1013	ANTIBIOTIC, TETRACYCLINE DERIVATIVE
1014	ANTIBIOTIC, TOPICAL
1017	ANTIBIOTIC, MISCELLANEOUS
1019	ANTICHOLINERGIC AGENT
1022	ANTICOAGULANT
1026	ANTICONSULSANT, BARBITURATE
1027	ANTICONSULSANT BENZODIAZEPINE
1029	ANTICONSULSANT, HYDANTOIN
1031	ANTICONSULSANT, SUCCINIMIDE
1032	ANTICONSULSANT, MISCELLANEOUS
1044	ANTIDEPRESSANT, ALPHA-2 ANTAGONIST
1050	ANTIDEPRESSANT, SELECTIVE SEROTONIN REUPTAKE INHIBITOR
1051	ANTIDEPRESSANT, SEROTONIN/NOREPINEPHRINE REUPTAKE INHIBITOR
1052	ANTIDEPRESSANT, SEROTONIN REUPTAKE INHIBITOR/ANTAGONIST
1057	ANTIDEPRESSANT, TRICYCLIC (SECONDARY AMINE)
1058	ANTIDEPRESSANT, TRICYCLIC (TERTIARY AMINE)
1063	ANTIDIABETIC AGENT, BIGUANIDE
1065	ANTIDIABETIC AGENT, SULFONYLUREA
1066	ANTIDIABETIC AGENT, THIAZOLIDINEDIONE
1069	ANTIDIARRHEAL
1073	CORTICOSTEROID PARENTERAL
1074	ANTIDOTE
1095	ANTIDOTE, EXTRAVASATION

Codes	Class Names
1122	ANTIEMETIC
1125	ANTIFLATULENT
1126	ANTIFUNGAL AGENT, IMIDAZOLE DERIVATIVE
1130	ANTIFUNGAL AGENT, ORAL
1131	ANTIFUNGAL AGENT, ORAL NONABSORBED
1134	ANTIFUNGAL AGENT, TOPICAL
1135	ANTIFUNGAL AGENT, VAGINAL
1138	ANTIGOUT AGENT
1156	ANTIHYPERTENSIVE
1162	ANTI-INFLAMMATORY AGENT
1169	ANTILIPEMIC AGENT, BILE ACID SEQUESTRANT
1170	ANTILIPEMIC AGENT, FIBRIC ACID
1171	ANTILIPEMIC AGENT, HMG-COA REDUCTASE INHIBITOR
1172	ANTILIPEMIC AGENT, MISCELLANEOUS
1173	ANTIMALARIAL AGENT
1174	ANTIMANIC AGENT
1177	ANTIMIGRAINE AGENT
1189	ANTINEOPLASTIC AGENT, ANTIMETABOLITE
1195	ANTINEOPLASTIC AGENT, AROMATASE INHIBITOR
1216	ANTINEOPLASTIC AGENT, MISCELLANEOUS
1219	ANTI-PARKINSON'S AGENT, ANTICHOLINERGIC
1221	ANTI-PARKINSON'S AGENT, DOPAMINE AGONIST
1225	ANTIPLATELET AGENT
1253	ANTIRETROVIRAL, PROTEASE INHIBITOR (ANTI-HIV)
1254	ANTIRETROVIRAL, REVERSE TRANSCRIPTASE INHIBITOR, NON-NUCLEOSIDE (ANTI-HIV)
1255	ANTIRETROVIRAL, REVERSE TRANSCRIPTASE INHIBITOR, NUCLEOSIDE (ANTI-HIV)
1257	ANTIRETROVIRAL, REVERSE TRANSCRIPTASE INHIBITOR, NUCLEOTIDE (ANTI-HIV)
1259	ANTIRHEUMATIC, DISEASE MODIFYING
1260	ANTISEBORRHEIC AGENT TOPICAL
1263	ANTISPASMODIC AGENT, URINARY
1268	ANTITUSSIVE
1277	ANTIVIRAL AGENT
1280	ANTIVIRAL AGENT, ORAL
1282	ANTIVIRAL AGENT, TOPICAL
1284	ASTRINGENT

Codes	Class Names
1286	BARBITURATE
1289	BENZODIAZEPINE
1291	BETA-BLOCKER, BETA-1 SELECTIVE
1293	BETA-BLOCKER, NONSELECTIVE
1294	BETA-BLOCKER WITH ALPHA-BLOCKING ACTIVITY
1295	BETA BLOCKER WITH INTRINSIC SYMPATHOMIMETIC ACTIVITY
1299	BETA 2 AGONIST
1303	BIOLOGICAL, MISCELLANEOUS
1305	BISPHOSPHONATE DERIVATIVE
1308	BLOOD VISCOSITY REDUCER AGENT
1313	CALCIUM CHANNEL BLOCKER
1314	CALCIUM SALT
1318	CARDIAC GLYCOSIDE
1320	CARDIOVASCULAR AGENT, MISCELLANEOUS
1326	CENTRAL NERVOUS SYSTEM DEPRESSANT
1343	CONTRACEPTIVE
1363	CORTICOSTEROID, INHALANT (ORAL)
1364	CORTICOSTEROID, NASAL
1365	CORTICOSTEROID, OPHTHALMIC
1367	CORTICOSTEROID, RECTAL
1369	CORTICOSTEROID, SYSTEMIC
1370	CORTICOSTEROID, TOPICAL
1379	COUGH PREPARATION
1380	DECONGESTANT
1382	DECONGESTANT/ANALGESIC
1390	DIAGNOSTIC AGENT
1428	DIETARY SUPPLEMENT
1435	DIURETIC, LOOP
1438	DIURETIC, POTASSIUM SPARING
1439	DIURETIC, THIAZIDE
1440	DIURETIC, THIAZIDE-RELATED
1447	ELECTROLYTE SUPPLEMENT, ORAL
1448	ELECTROLYTE SUPPLEMENT, PARENTERAL
1449	ENZYME
1463	ESTROGEN AND PROGESTIN COMBINATION
1464	ESTROGEN DERIVATIVE
1472	EXPECTORANT

Codes	Class Names
1481	GALLSTONE DISSOLUTION AGENT
1486	GASTROINTESTINAL AGENT, PROKINETIC
1488	GASTROINTESTINAL AGENT, MISCELLANEOUS
1489	GENERAL ANESTHETIC
1497	GONADOTROPIN
1504	HEMOSTATIC AGENT
1507	HISTAMINE H 2 ANTAGONIST
1509	HOMOCYSTINURIA, TREATMENT AGENT
1510	HORMONE
1523	HYPNOTIC, MISCELLANEOUS
1528	IMMUNOSUPPRESSANT AGENT
1534	IRON SALT
1536	KERATOLYTIC AGENT
1537	LAXATIVE
1539	LAXATIVE, BULK-PRODUCING
1543	LAXATIVE, OSMOTIC
1544	LAXATIVE, SALINE
1545	LAXATIVE, STIMULANT
1551	LEUKOTRIENE RECEPTOR ANTAGONIST
1554	LIPASE INHIBITOR
1557	LOCAL ANESTHETIC
1576	MAGNESIUM SALT
1577	MAST CELL STABILIZER
1585	MONOCLONAL ANTIBODY
1589	OPIOID ANTAGONIST
1597	NEUROMUSCULAR BLOCKER AGENT, TOXIN
1599	NONSTEROIDAL ANTI-INFLAMMATORY DRUG (NSAID)
1600	NONSTEROIDAL ANTI-INFLAMMATORY DRUG (NSAID), COX-2 SELECTIVE
1602	NONSTEROIDAL ANTI-INFLAMMATORY DRUG (NSAID), ORAL
1603	NONSTEROIDAL ANTI-INFLAMMATORY DRUG (NSAID), PARENTERAL
1604	NUTRITIONAL SUPPLEMENT
1607	OPHTHALMIC AGENT, ANTIGLAUCOMA
1611	OPHTHALMIC AGENT, TOXIN
1612	OPHTHALMIC AGENT, VASOCONSTRICTOR
1614	OPHTHALMIC AGENT, MISCELLANEOUS
1620	OVULATION STIMULATOR
1627	PHENOTHIAZINE DERIVATIVE

Codes	Class Names
1629	PHOSPHATE BINDER
1644	PROGESTIN
1646	PROSTAGLANDIN
1647	PROSTAGLANDIN, OPHTHALMIC
1651	PROTON PUMP INHIBITOR
1661	RETINOIC ACID DERIVATIVE
1665	SALICYLATE
1670	SEDATIVE
1671	SELECTIVE ESTROGEN RECEPTOR MODULATOR (SERM)
1672	SELECTIVE 5-HT 3 RECEPTOR ANTAGONIST
1681	SKELETAL MUSCLE RELAXANT
1683	SKIN AND MUCOUS MEMBRANE AGENT
1687	SKIN AND MUCOUS MEMBRANE AGENT, MISCELLANEOUS
1688	SMOKING CESSATION AID
1691	SOMATOSTATIN ANALOG
1694	STOOL SOFTENER
1700	SYMPATHOMIMETIC
1710	THYROID PRODUCT
1712	TOPICAL SKIN PRODUCT
1713	TOPICAL SKIN PRODUCT, ACNE
1718	TRACE ELEMENT
1719	TRACE ELEMENT, PARENTERAL
1729	URICOSURIC AGENT
1742	VASODILATOR
1750	VITAMIN
1752	VITAMIN D ANALOG
1753	VITAMIN, FAT SOLUBLE
1756	VITAMIN, WATER SOLUBLE
1757	XANTHINE OXIDASE INHIBITOR
1762	SEROTONIN 5-HT 1B, 1D RECEPTOR AGONIST
1765	CENTRAL NERVOUS SYSTEM STIMULANT
1768	HISTAMINE H 1 ANTAGONIST
1779	5 ALPHA-REDUCTASE INHIBITOR
1781	ANTILIPEMIC AGENT, 2-AZETIDINONE
1808	MONOCLONAL ANTIBODY, ANTI-ASTHMATIC
1810	N-METHYL-D-ASPARTATE RECEPTOR ANTAGONIST
1811	PHOSPHODIESTERASE-5 ENZYME INHIBITOR

Codes	Class Names
1822	ANTINEOPLASTIC AGENT, ANTIMETABOLITE (ANTIFOLATE)
1824	SUBSTITUTED BENZIMIDAZOLE
1825	ANTISEPTIC, TOPICAL
1827	SECOND GENERATION (ATYPICAL) ANTIPSYCHOTIC
1828	FIRST GENERATION (TYPICAL) ANTIPSYCHOTIC
1830	AMINO ACID
1831	TUMOR NECROSIS FACTOR (TNF) BLOCKING AGENT
1833	MONOCLONAL ANTIBODY, SELECTIVE ADHESION-MOLECULE INHIBITOR
37021	PROBIOTIC
309141	ANTIBIOTIC, LINCOSAMIDE
369942	INSULIN, INTERMEDIATE-ACTING
369943	INSULIN, LONG-ACTING
370141	INSULIN, RAPID-ACTING
512625	PARTIAL NICOTINE AGONIST
515063	IMIDAZOLINE DERIVATIVE
580286	ANTIDIABETIC AGENT, DIPEPTIDYL PEPTIDASE IV (DPP-IV) INHIBITOR
944618	ANTIRETROVIRAL, CCR5 ANTAGONIST (ANTI-HIV)
996578	ANTIRETROVIRAL, INTEGRASE INHIBITOR (ANTI-HIV)
996698	ANTINEOPLASTIC AGENT, ANTIMETABOLITE (PYRIMIDINE ANALOG)
1035979	ANILIDOPIPERIDINE OPIOID
1154061	RESCUE AGENT (CHEMOTHERAPY)
1154062	CHEMOTHERAPY MODULATING AGENT
1160459	BETA 2 -ADRENERGIC AGONIST, LONG-ACTING
1160479	BETA 2 AGONIST, LONG-ACTING
1163619	NONSTEROIDAL ANTI-INFLAMMATORY DRUG (NSAID), TOPICAL
1177583	HISTAMINE H 1 ANTAGONIST, SECOND GENERATION
1177584	HISTAMINE H 1 ANTAGONIST, FIRST GENERATION
1191179	VASODILATOR, DIRECT-ACTING
1274399	IMMUNOMODULATOR, SYSTEMIC
1284841	HISTONE DEACETYLASE INHIBITOR
1797079	CALCIUM CHANNEL BLOCKER, NONDIHYDROPYRIDINE
1797080	CALCIUM CHANNEL BLOCKER, DIHYDROPYRIDINE
1801719	CALCINEURIN INHIBITOR
1826674	ANTIPLATELET AGENT, THIENOPYRIDINE
2148013	ANTIDIABETIC AGENT, GLUCAGON-LIKE PEPTIDE-1 (GLP-1) RECEPTOR AGONIST
2759759	ANTI-PARKINSON'S AGENT, DECARBOXYLASE INHIBITOR

Codes	Class Names
2759760	ANTI-PARKINSON'S AGENT, DOPAMINE PRECURSOR
2792400	ANTINEOPLASTIC AGENT, ANTIMETABOLITE (PURINE ANALOG)
2807279	TRANSIENT RECEPTOR POTENTIAL VANILLOID 1 (TRPV1) AGONIST
2952225	ALKYLAMINE DERIVATIVE
2952299	ETHANOLAMINE DERIVATIVE
2952340	PIPERAZINE DERIVATIVE
2952559	PIPERIDINE DERIVATIVE
2965759	FIBER SUPPLEMENT
2988377	ANALGESIC, OPIOID PARTIAL AGONIST
3015214	ANTIDEPRESSANT, SELECTIVE SEROTONIN REUPTAKE INHIBITOR/5-HT 1A RECEPTOR PARTIAL AGONIST
3451903	BONE-MODIFYING AGENT
3501084	GABA ANALOG
3509782	ALPHA-ADRENERGIC AGONIST
3819764	BETA 3 AGONIST
3861322	PHOSPHODIESTERASE ENZYME INHIBITOR, NONSELECTIVE
3964448	PYRIMIDINE SYNTHESIS INHIBITOR
3974202	ANTILIPEMIC AGENT, OMEGA-3 FATTY ACIDS
3988862	ANTICHOLINERGIC AGENT, LONG-ACTING
4230723	SODIUM-GLUCOSE COTRANSPORTER 2 (SGLT2) INHIBITOR
4230724	ANTIDIABETIC AGENT, SODIUM-GLUCOSE COTRANSPORTER 2 (SGLT2) INHIBITOR
4230742	FUMARIC ACID DERIVATIVE
4496663	CARBONIC ANHYDRASE INHIBITOR (OPHTHALMIC)
4649822	ANTIHEMORRHOIDAL AGENT
4857382	ANTIHEPADNAVIRAL, REVERSE TRANSCRIPTASE INHIBITOR, NUCLEOSIDE (ANTI-HBV)
5002622	ANTICOAGULANT, FACTOR XA INHIBITOR
5002623	ANTICOAGULANT, VITAMIN K ANTAGONIST
5002625	ANTICOAGULANT, DIRECT THROMBIN INHIBITOR
5251182	MEDICAL FOOD
5357662	ANTIDEPRESSANT, DOPAMINE/NOREPINEPHRINE-REUPTAKE INHIBITOR
5585170	MINERALOCORTICOID (ALDOSTERONE) RECEPTOR ANTAGONISTS
6004244	ANTIFUNGAL AGENT ORAL NONABSORBED PARTIALLY ABSORBED
6024732	DIRECT ORAL ANTICOAGULANT DOAC
6433523	GUANYLATE CYCLASE C GC C AGONIST
9999999	INAPP
